EDUCATION

Northeastern University

M.S. in Computer Science

Boston, MA

May 2027 - expected graduation

Related Coursework: Foundations of AI, Data Structures And Algorithms, Database Management, Web Development, Mobile Application Development, ML Ops

EXPERIENCE

PAMP technologies (MKS PAMP)

Software Engineer Intern

Kochi, India

June 2024 - Nov 2024

- Rebuilt a 5+ year legacy trading portal frontend using React, Redux, and Chart.js, delivering real-time gold price visualizations for active institutional traders; reduced page load time by 35% and improved trade execution responsiveness by 25%
- Coordinated a 4-person frontend intern team on sprint planning and code reviews, collaborating cross-functionally with product and design to ship 12+ features across 6 release cycles.
- Refactored Redux state architecture and memoized selector patterns, eliminating 40% of unnecessary re-renders across data-intensive trading dashboards.

Cloud Institution

Cloud Engineering Trainee

Bengaluru, India

Apr 2024 – May 2024

- Built Docker multi-stage images for Node.js and Python services and configured Jenkins CI/CD pipelines to automate build, test, and deployment stages.
- Implemented Terraform modules to provision AWS infrastructure (EC2, S3, IAM, VPC), improving consistency of staging deployments.

PROJECTS

Foresight-ML (Corporate Financial Distress Early-Warning System) - 1st Place - Google MLops Expo

Python, XGBoost, Airflow, DVC, Docker, GCP, CI/CD

- Built an end-to-end MLops platform scoring 10,000+ US public companies for 6-month distress probability; ingested SEC EDGAR filings and FRED macroeconomic data, transforming raw XBRL into validated panel-ready Parquet datasets via automated pipelines.
- Trained an XGBoost classifier with Optuna hyperparameter tuning on 50+ engineered financial and macroeconomic features, achieving 0.977 ROC-AUC; integrated SHAP explainability to surface per-company risk drivers for analyst decision-making.
- Served real-time predictions via FastAPI on Cloud Run and built a Streamlit dashboard for risk scoring and SHAP drilldowns; containerized workflows with Docker/DVC, orchestrated via Airflow, with MLflow experiment tracking and Evidently AI drift monitoring.

Sign Lingo (AI-Based ASL learning Platform)

React, FastAPI, MongoDB, OpenCV, MediaPipe, LSTM, WebSockets, TensorFlow

- Built a real-time ASL live practice system that streams webcam frames via WebSocket to a FastAPI inference service; trained Random Forest + LSTM models to achieve 98%+ gesture recognition accuracy with stable predictions.
- Designed a production-ready AI inference pipeline with confidence-based feedback and robust error handling, achieving sub-120ms latency and supporting 600 concurrent users with consistently positive user and instructor feedback.
- Implemented end-to-end session tracking (detections, scores, timestamps) to surface measurable learning progress within the product experience.

SKILLS

Languages: Java, Python, C++, JavaScript/TypeScript, SQL, HTML5, CSS3, Three.js

Frameworks & Libraries: React, Next.js, Redux, Express.js, FastAPI, Tailwind CSS, Scikit-learn, MediaPipe

Cloud & Infrastructure: AWS (EC2, S3, IAM, VPC), GCP, Docker, Kubernetes, Terraform, Jenkins, GitHub Actions

Databases & Tools: PostgreSQL, MongoDB, Git, Airflow, DVC, VS Code, Cursor, GitHub Copilot, Claude Code
